PROFESSIONAL SUMMARY

Software Engineer with 2+ years building production-grade REST APIs, workflow automation systems, and client-facing platforms in Java, Spring Boot, Spring Security, and Python. Worked across compliance and energy domains at early-stage startups — stepped up as product owner on multiple regional platform rollouts, owning requirement gathering, team coordination, Business Development, and UAT sign-off end to end. Experienced with React.js, MySQL, AWS, Docker, and CI/CD pipelines. Looking for a team where ownership and clean architecture matter.

TECHNICAL SKILLS

Languages: Java, Python, SQL, Bash

Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, React.js, REST Assured

Databases: MySQL

Messaging & Caching: Kafka (concepts), Redis (concepts + Spring integration)

Cloud & DevOps: AWS (EC2, S3, VPC), Docker, Jenkins, CI/CD

Testing & Automation: Selenium, TestNG, Postman, SonarQube

Tools: Git, GitHub, Maven, JIRA

Familiar with: Generative AI concepts, LLM APIs

WORK EXPERIENCE

Software Engineer — FIOS Compliance

Nov 2025 – June 2026

- Designed and maintained Spring Boot REST APIs powering core compliance workflows, handling multi-source data ingestion and business rule validation across multiple client environments
- Built React.js dashboard components with real-time data rendering, integrating directly with Spring Boot REST APIs for live compliance reporting
- Built Selenium WebDriver automation pipelines to extract and normalize data from multiple external sources, replacing manual data collection processes entirely — including dynamic JavaScript-rendered pages requiring headless browser execution
- Automated end-to-end data extraction, validation, and transformation workflows using Java and Selenium, significantly reducing manual effort and turnaround time for compliance reporting cycles

Software Engineer — GNA Energy

Sep 2024 – Oct 2025

- Managed Power Sector BD for AdaniBoard, leading client meetings with PTC, HPPC, and other enterprise stakeholders to drive business alignment and partnerships.
- Owned full-cycle delivery of region-specific web platforms — gathered client requirements, managed cross-functional task delegation, and drove UAT sign-off across multiple state deployments as the de facto product owner.
- Designed and developed Spring Boot REST APIs for internal energy reporting platforms, supporting business operations across multiple state-level deployments
- Built ETL data processing modules using Kafka for event streaming and Redis for distributed caching
- Automated recurring data processing and validation workflows, eliminating manual data entry steps and reducing error rates across reporting pipelines

QA Intern — JPFT

June 2024 – Sep 2024

- Wrote and executed functional, regression, and smoke test cases across multiple application modules, tracking 50+ defects end-to-end in JIRA
- Built automated regression test scripts using Selenium WebDriver, reducing manual testing cycles

DevOps Intern — Xebia

Aug 2023 – Nov 2023

- Deployed a full-stack employee management portal on AWS EC2, setting up CI/CD pipelines with Jenkins and Docker that cut deployment time significantly
- Integrated SonarQube into the CI/CD workflow for automated code quality checks, improving overall code health across the team

PROJECTS

AI Question Generation System:

- Built a Python and Flask REST API backend for AI-powered question generation and answer evaluation, integrating NLP-based semantic similarity scoring for automated response assessment

Inventory Optimization:

- Implemented Ant Colony Optimization (ACO) and Markov Decision Process (MDP) algorithms in Java to simulate and optimize inventory allocation across dynamic supply scenarios

EDUCATION

SRM University

2020-2024

- B.Tech, Computer Science and Engineering (Specialization in Cloud Engineering and DevOps Automation)

CGPA: 7.9/10.0

- Coursework:** Data Structures, Algorithms, OOP, Database Management, Operating Systems
